

cmac — Complex Multiply-Accumulate Cell

out = $\sum_j M_j \cdot A_j$ ($j=0..3$) · full-width products · single rounding · saturating

Instantiations:

1-qubit butterfly → 2 active terms
(u_bf0 = row0, u_bf1 = row1)
2-qubit 4×4 → 4 active terms
(u_r0 ... u_r3 = rows 0..3)
unused terms fed $M_j = 0$
